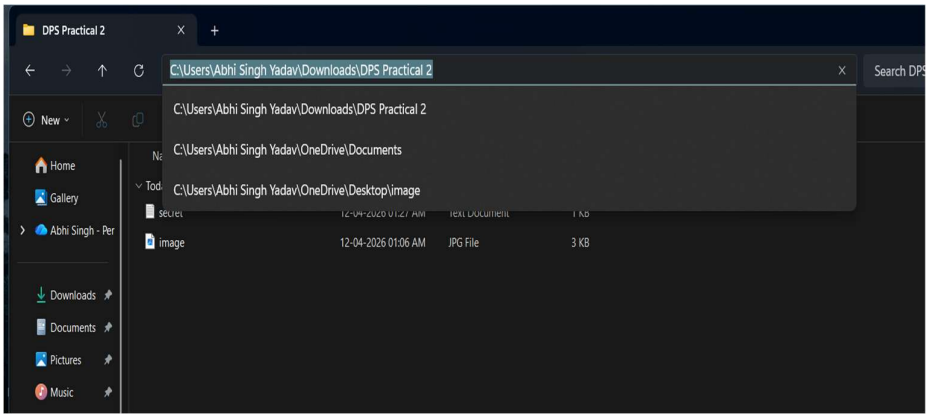
Practical 2

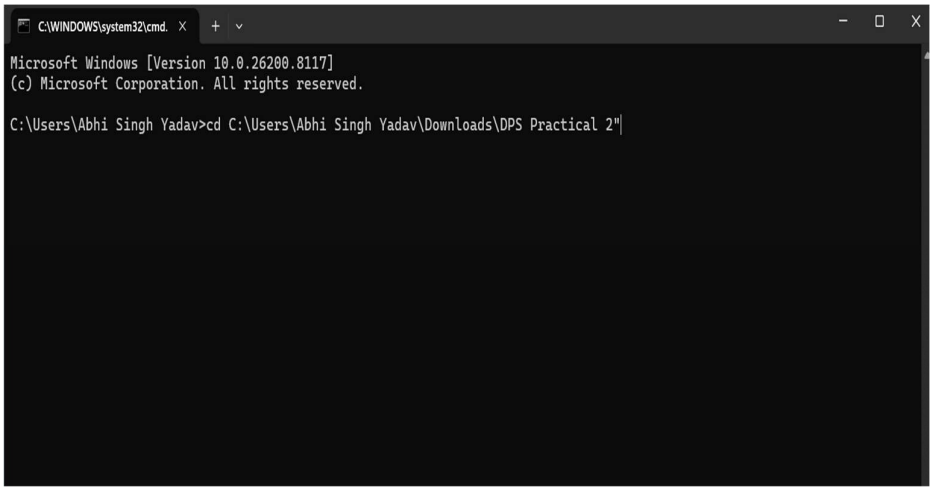
Practical No. 2: Secret message hiding using CMD

Steps-

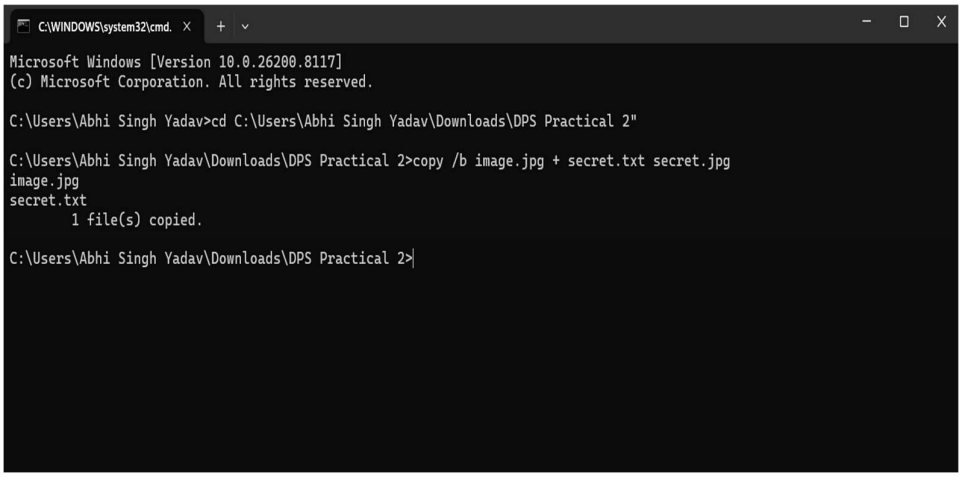
1. Step1- First, create a folder (eg-Secret data) and add image file that you want to use for hiding data, Then add text file where the data is stored, inside this folder.



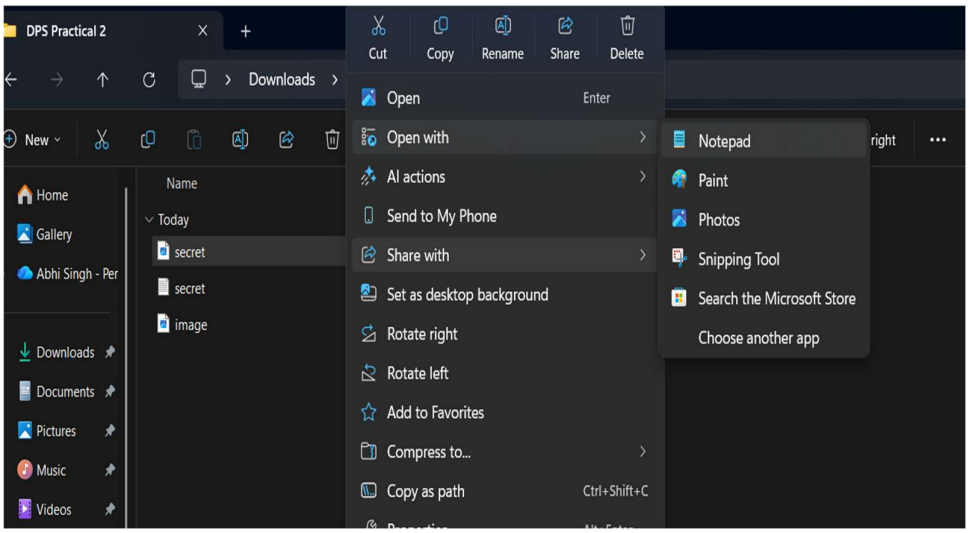
2. Step2- Now, Run the command prompt using command windows+R and type cmd.
3. Step3- Then, Change the working directory to the folder where the image and the text file are stored by command "cd C:\Users\Downloads\Secret data"



4. Step4- Now, Type the command "copy /b image.jpg + secret.txt secret.jpg" which means the secret message is store inside the image and the final output file will be stored in jpg format.
5. Step5- Then, you will get the message of final copied, so now you can cancel terminal and open the folder and you will see the image file that have hide secret message.



6. Step6- Now, Right Click on the image and open it with the notepad to see the hide message.



7. Step7- Then, you will see the final message at the bottom of the file, it will stored in between unreadable language.
